

Wacky Weather World

The acronym for this title is www. The common impression for what www means is probably one of the biggest reasons for our wacky weather world. The World Wide Web has helped increase the bulldozing, drilling, mining, exploding, blacktopping and concreting of the earth and has put many people in stressful conditions that often makes them turn to pharmaceuticals.

Humans have put up more cell towers, more wind turbines, more solar panels, more satellites into space and have manufactured more computers. All of these require damaging the earth and all lead nations to build weapons of mass destruction and to test their bombs and missiles including the firing of them into the atmosphere.

All of this leads to stress, depression and anxiety. This leads to other health problems. Because of this pharmaceutical companies and medical technology companies destroy the earth to make products that might give some humans temporary relief from their health woes.

Who are the humans leading this charge. In almost all cases, it is those who have graduated from a university or college somewhere in the world. Universities and colleges spend a lot of money and effort on recruiting students to come to their university or college rather than another one. Myriads of flyers and posters are sent all over the world to libraries, universities and colleges to encourage young minds to learn how to use computers that help create a Wacky Weather World.

Many universities and colleges spend a large portion of their effort and money on building sports programs. These sports programs generate all kinds of problems for the earth and world in order to get their alumni to attend the sporting events and to then give donations to the sports programs behind the sporting events.

Imagine what kind of weather we would have if universities and colleges made students, administrators, staff and faculty think about living a simpler life that leads to peace and kindness. Instead of thinking about ways to generate electricity that leads to mercenaries fighting all over the planet for natural resources, people could learn to live lives that are more in harmony with nature and enjoy looking at the wonders of creation rather than trying to solve the problems made by the creations of humans. What a wonderful world that might be. Maybe a Wonderful Wide World! (credits to mm)
