Department of Mathematics and Statistics Colloquium

Mathematical Disguises

Alyssa Crans

Loyola Marymount University

Abstract: In honor of Halloween, let's investigate how mathematical gadgets, ideas, and people can disguise themselves! Using different points of view, such as viewing certain objects wearing our algebraic and geometric glasses, we'll see how mathematicians can view the same object in multiple, perhaps even unexpected, ways. Mathematics students at all levels are encouraged to attend and wear disguises (mathematical or otherwise)!
