Department of Mathematics and Statistics Colloquium

Math Escape Rooms

Math 470 Students

James Madison University

Abstract: Escape Rooms are becoming more popular in K-12 mathematics classrooms. They are a fun and creative way to engage students to collaboratively work together to solve various math puzzles, riddles, and challenges within a specified time limit. Students in Math 470 (Connections in Mathematics) are creating Escape Rooms that will be implemented in high school Algebra I classrooms. During this colloquium, you will have the opportunity to pilot test their Escape Rooms and offer any feedback on how to improve them.
