*The MAA Instructional Practices Guide: A Resource for
Change*

Doug Ensley

Shippensburg University

Abstract: The MAA Instructional Practices Guide presents evidence-based methods for engaging students in the mathematics classroom. Beyond documenting active-learning strategies, the guide also includes practices for assessment and course design that support these strategies. This presentation will, of course, include an overview of the project, but be sure to bring a pencil. Throughout the presentation we will be putting some of the practices into, well, practice.
