Visualizing Covid Racial Disparities in the United States

Rachel Hosig, Gus Horkan, and Natalia Johansen

Department of Mathematics and Statistics

James Madison University

Abstract: This semester, the American Statistical Association: JMU Student Chapter has been exploring ways to visualize data related to the Covid-19 pandemic. Since racial justice is an important issue in the United States, we decided to focus on racial health disparities that exist in Covid-19 cases and deaths. We used R to create data visualizations, including visual maps showing racial disparities in Covid-19 cases and deaths within each state.
