Kidney transplants, the real Iron Man Suit, and the movie “The Incredibles”: What Can you Do with a Degree in Math?

Michael Dorff, Brigham Young University

Abstract: Have you (or your friends or your parents) ever asked "What can you do with a degree in math?" Besides teaching, many people are clueless on what occupations use strong math skills. In this talk we will discuss careers that use math from a scientist researching new methods in computer-generated imagery at Pixar Animation Studios to an operations research analyst working with a kidney transplant physician at John Hopkins University School of Medicine. Also, we will discuss what recruiters say you should do to get a good job.

Monday, October 8 at 7:30 in Burruss 31, refreshments at 7:15
