

## ACKNOWLEDGMENTS\*

There are many people I would like to thank for help and support.

First of all, I am deeply grateful to my advisor, Dr. Ellen Prince, who had a profound influence on what I consider to be the most interesting questions in linguistics, and who generously offered her guidance, support and friendship, as well as the occasional therapeutic night out.

I am also indebted to the members of my dissertation committee: Dr. Aravind Joshi, especially for sharing the insight that computational and theoretical goals can be mutually compatible and beneficial; Dr. Tony Kroch, who taught me always to question assumptions, including my own; and Dr. Susumu Kuno, for a wise and friendly ear in Cambridge and an uncanny knack for determining the significant examples.

There are many fellow students who have, most importantly, become my friends, and secondly, been an important source of helpful comments and general support over the years. Thanks especially to Beth Ann Hockey, Lyn Walker, Ümit Turan, Caroline Heycock, Megan Moser, Enric Vallduví, Josep Fontana, Breck Baldwin, Michael Niv, Chang-Bong Lee, and Felicia Hurewitz. Thanks also to Betty Birner, Cathy Ball, and all the participants in Ellen's discourse seminars.

More generally, I am glad to have been a student in the truly special Linguistics Graduate Group at the University of Pennsylvania, and to have had the opportunity to share in the stimulating environment at the Institute for Research in Cognitive Science.

Thanks also to the members of the AI Research Group at Harvard for taking me in while I was in Cambridge.

To my parents and all the members of my wonderful family, thank you for supporting my goal even when you couldn't help wondering *why* I wanted to do this.

Finally, Dave -- there are no words ...

\* This research was partially funded by the Institute for Research in Cognitive Science at the University of Pennsylvania.
